

Healthx Feature - Dynamic Information Management Services

Healthx DIMeS allows you to connect and display specific content to an single user based upon the data elements contained in that individual's record. Each user has access to the information that is relevant to him or her. Thus, plan documents, riders, policies, along with access to product or group-specific content like wellness programs, FSA accounts, and provider networks are all dynamically displayed when that user logs in.

Healthx has optimized this system so plan administrators can build the roadmap for each user determined by a "rules-based" set of data maps.

The advantages include:

- Personalized User Experience – Customized presentation of data, vendor applications, documents, and links associated with the benefit plan or product for that person.
- Self-Service Administration – A "set it and forget it" process lets you update content and data behind the scenes while feeling secure in the knowledge that each user can only view their own customized web experience.
- Ease of Navigation – Providing immediate access to personalized content ensures improved user experience and overall satisfaction with web services.
- Interoperability of Systems – Keeps data and content securely stored in the system of record, and doesn't require needless data extracts or costly integrations. By using DIMeS, Healthx is able to access multiple systems through a variety of methods, including Web Services Calls or Single Sign-On Services.

Looking for that perfect portal experience to drive engagement? Healthx DIMeS is a step in the right direction! Find out more at www.healthx.com.

Healthx makes it easier to guarantee that a personalized experience is maintained for each user. The key to user satisfaction is providing access to the content and data that pertains to each individual.
