

Healthx Platform Core Applications - DIMeS

Dynamically Sharing Targeted Information with Groups of Users (DIMeS)

Healthx DIMeS allows you to automatically link specific documents, web links and services to individual users or groups of users, presented where and when you know they'll need it. By tying a series of documents to information associated with a user, we can make sure that each person has access to the documents and links that are assigned to them; one user sees one set of documents while another user sees another set of documents, automatically. We've optimized this system for plan documents such as Summary Plan Descriptions, PPO and PBM links, but it's flexible enough to dynamically share any set of documents or services

DIMeS advantages include:

- Easier navigation for users to find the information you know they'll need.
- Automatically points users to the documents you want them to see.

- Self-service administration - "set it and forget it". As you update your documents and put them on the web, everything syncs automatically and users automatically get the latest version of the documents.

The Cloud Makes it Easier

By storing plan documents and other key pieces of member information in the cloud, we can begin to intelligently deliver these documents based on information we already know about your members, such as their plan group. This intelligent document presentation means you don't have to worry about a member being confused by the wrong plan documentation. You decide which plan document a user sees.

Core Applications are built into the Healthx Platform. They are ready to go from day one. Find out about the Healthx Platform Core Applications in the Healthx Application Marketplace at www.healthx.com.
