

Healthx Platform Core Applications - iPortals

Portal Solutions for Every Unique Need

Recognizing that every person visits your web site for different reasons, and that each has a unique set of business requirements and self service expectations, Healthx gives you the ability to provide your user community with the web tools that they need in order to interact with you the way you want.

Our on-demand, cloud-based IT services allow you to customize the presentation and services within the portal for each of your user types. Providers, Members, Employers, Brokers and Business Partners all come to you with different needs, and each can have that need fulfilled through the Healthx Portal solution. Because these portals are built on the same platform, they are easy to build and maintain. Documents, links, and information you provide in one portal are automatically available to be used in another portal at your discretion. This makes maintenance a snap. Updated a policy? It is automatically updated in all your portals as soon as you update it in one.

Customize it for Increased User Satisfaction

Finally, you can customize the look-and-feel of each portal independently, allowing you to maintain control of an overall framework, but providing the flexibility you need to work with different groups independently.

Core Applications are built into the Healthx Platform. They are ready to go from day one. Find out about the Healthx Platform Core Applications in the Healthx Application Marketplace at www.healthx.com.
