

Managed Care Concepts (MCC)[™] - Disease Management

HELP TO CONTROL YOUR **HEALTHCARE COSTS**

“If Payers and employers focus solely on high risk populations, they are missing the 20% of low risk populations who are moving to medium or high risk---and they miss the 40% of medium risk who are migrating to high risk.”

Healthx's newest Disease Management partner, MCC analyzes HRA, claim and prescription data to identify and stratify those members with chronic conditions. Individuals can also self-nominate into the DM program via a health survey. Members are educated by program nurses, sent information regarding their conditions, and referred to a variety of online resources specific to the condition(s) they exhibit.

Primary Care Providers are an integral part of the Disease Management program offered by Healthx and MCC. This DM program was developed in conjunction with physicians, medical directors and peer review panels. Every provider who has a member in the program receives notification of his/her patient's participation in the program as well as a physician disclosure statement. The statement explains the purpose of the program, the provider's rights and responsibilities under the program, AND invites recommendations and input from the attending physician.
